ALLOWANCE

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The closest prior art for the features of the claimed invention are Namba et al. (US Patent 6,494,783; hereinafter Namba), Hoshino (JP Patent Application Publication 2001-12949), Rimoto et al. (US Patent 6,503,144; hereinafter Rimoto), Sterchi et al. (US Patent Application Publication 2005/0153764; hereinafter Sterchi).

However, Namba alone or in combination with Hoshino, Rimoto, and Sterchi does not disclose a non-transitory computer readable medium and video game method including

“a video game program that causes a computer to implement a video game that is executed by means of a controller, in which a character and a moving object are displayed on a monitor, and the moving object is dispatched by the character having a dispatching form that is a posture of the character at a point of dispatching the moving object, the video game program comprising: code programed to receive an operation initiation request from the controller in order to cause the character to initiate a dispatch operation until the moving object is dispatched; code programed to display the dispatch operation of the character on the monitor when the operation initiation request is received: code programed to receive a request to dispatch the moving object from the controller when the dispatch operation of the character is continuously displayed on the monitor; code programed to set the point of dispatching the moving object from the character according to a timing at which the dispatch request is received, and to set deviance in a trajectory of the moving object between the point and a destination based on the dispatching form of the character wherein the moving object is controlled to move from the point to the destination on the basis of the deviance; code programed to

display the moving object controlled on the monitor; the code programed to set the point of dispatching the moving object including code programed to control the deviation of the moving object in the trajectory on the basis of the dispatching form of the character, and controlling the point of dispatching the moving object when the dispatch operation of the character is continuously displayed on the monitor.”

Thus, the claimed invention is not anticipated by nor obvious over the closest prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
